

Dog Poop Facts

- ♥ Pet waste can transmit bacteria and viruses such as tapeworm, roundworm, E. coli, Parvo, and more.
- ♥ Dog waste is one of the top contributors to groundwater contamination including ditches for drainage, creeks that carry rainwater, and streams that empty into lakes and rivers. This will make you think twice about going swimming in your local water hole!
- ♥ Pet waste, can not only damage your lawn, it can also give your lawn an unsightly appearance which could affect the value of your home. Pet waste is poisonous to your lawn.
- ♥ Pet waste cannot be composted or used as fertilizer due to possible blood pathogens in the poop.
- ♥ Pets can go anywhere from 1 – 2 times a day leaving up to a pound of waste each time. If you own more than 1 pet, that's a lot of poop!
- ♥ Dog waste can attract pests into your lawn or even the dumping of cat litter in your trash can attract mice and be breeding grounds for parasites.
- ♥ Dog waste is not tennis shoe or sock-friendly. It will find your footwear without you knowing it if your yard isn't properly maintained. Save a shoe! Save a sock! Keep your lawn and carpet poop free! Call us today!

Let us dispose of your waste properly. We dispose of your pet waste to a licensed and **EPA-approved landfill** where it will be disposed of properly. Besides, it may take up to a year for dog waste to decompose in your yard.
